

1 Create a basic Flask web application with multiple routes (home, about, contact).

AIM

To create a basic Flask web application that demonstrates multiple routes (, ,).

ALGORITHM

1. Install Flask ().
2. Import Flask from the library.
3. Create a Flask app object.
4. Define routes using for:
 - Home ()
 - About ()
 - Contact ()
5. Return simple HTML/text responses for each route.
6. Run the application using .

CODE

```
from flask import Flask
```

```
# Create Flask app
```

```
app = Flask(__name__)
```

```
# Home route
```

```
@app.route("/")
```

```
def home():
```

```
    return "<h1>Welcome to the Home Page</h1><p>This is the main route.</p>"
```

```
# About route
```

```
@app.route("/about")
```

```

def about():
    return "<h1>About Us</h1><p>This page gives information about our
application.</p>"

# Contact route
@app.route("/contact")
def contact():
    return "<h1>Contact Us</h1><p>You can reach us at contact@example.com</p>"

# Run the app
if __name__ == "__main__":
    app.run(debug=True)

```

OUTPUT

Welcome to the Home Page

This is the main route.

About Us

This page gives information about our application.

Contact Us

You can reach us at contact@example.com

2 Create a Flask route that displays 'Hello World' on the browser.

AIM

To write a Python program using Flask that defines a route () and displays Hello World on the browser.

ALGORITHM

1. Install Flask ().
2. Import Flask from the library.

3. Create a Flask app object.
4. Define a route () using .
5. Return the string .
6. Run the application using .

CODE

```
from flask import Flask
```

```
# Create Flask app
```

```
app = Flask(__name__)
```

```
# Define route
```

```
@app.route("/")
```

```
def hello():
```

```
    return "Hello World"
```

```
# Run the app
```

```
if __name__ == "__main__":
```

```
    app.run(debug=True)
```

OUTPUT

Hello World

CONCLUSION

This program demonstrates:

- Flask basics: creating an app and defining a route.
- Route : displays on the browser.
- It's the simplest starting point for building Flask web applications.
